World's safest
roof box system

MIMsafes luggage box - the only one of its kind!

We always put safety first and also hope you will like the design of our latest safety aid. We are known around the world for our crash-tested dog cages and now we are also setting a new crash safety standard for roof boxes.

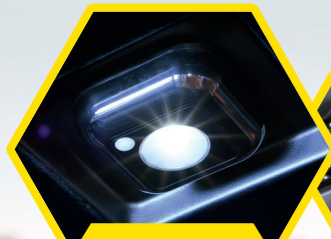

The top and bottom sections of our new luggage box are double-walled to provide stability. It is equipped with our unique crash safety and energy absorbing system TEAS. This system absorbs the violent impact that may occur in a collision, which ensures the roof box remains on its mountings on the roof and does not fly off and possibly injure others.

Can handle forces up to 26g

For you and your fellow road users' safety, we have set a completely new crash standard. We have tested our roof box at a speed of 50 km/h at a crash pulse in accordance with the ECE R17 standard. The test showed that the roof box can withstand a force of up to 26g.

WASHABLE CARPET
